ON THE THEORY OF A MULTI-SEGMENT MAGNETRON. [1961] 10p. 3 refs.
Order from LC or SLA mi$1.80, ph$1.80 61-10856

Trans. of Zhurnal Tekhnicheskoy Fiziki (USSR) 1952, v. 22, no. 10, p. 1592-1598.

The energy relationships in a multi-segment magnetron were investigated. The multi-segment magnetron was represented by a closed sequence of intervals having alternating fields (slots) and drift spaces. Fundamental kinematic relationships were derived, which are the starting point for the calculation of the energy balance in an electron stream. The electron stream itself is included in such a system of n-slots. As a result of this calculation general formulas were found and applied to the specific cases of two, three, and four slots. Comparison of the calculated values with those obtained by experiment disclosed a satisfactory agreement between the observed and calculated excitation
